Care For Your Painted Windows

Paint will scratch if force is used (scrapers, scrub brush, fingernail). Be gentle with the surface.

Water will not disturb the paint (ie, a normal amount of rain), but cleaners may dissolve it. Be careful with use of chemicals near your painted window.

If you need to clean the glass, clean *around* painted areas with a damp cloth.

If the painted surface is dusty, dust gently with a dry, soft cloth.

Removal of Your Window Painting

Removal service is available upon request! Removing the paint is **easy enough that you can do it yourself**, but feel free to call us to schedule a fast and friendly clean up.

DIY Instructions for removal:

Spray or wet the painted areas liberally with water. Let soak 1 min.

Re-spray or wet down the painted areas and begin scraping. Using a razor blade⁰² scraper, scrape the loosened paint off. It will slide off easily. We recommend using a brand new blade. If it seems stubborn, use more water.

TIP: Try to catch the paint as it comes off the window with your opposite hand and have a garbage can ready to drop the excess paint into. But of course, be careful of the blade!

Use *window cleaner* if desired for final cleanup of the glass.

Thank you for your business! It has been a pleasure painting for you!
